

Online Registration of Indian Diaspora STEM professionals abroad .

Research and Information Systems for Developing Countries (RIS) , an independent think tank in Delhi, supported by the Ministry of External Affairs, Govt of India is implementing a Science Diplomacy project with support from the Department of Science and Technology, Govt of India. For details please see our website <http://fisd.in> . Science Diplomacy basically involves bringing about much closer coordination between science and technology and Indian diplomacy to achieve national goals.

An important part of our project is to reach out to Science, Technology, Engineering and Medicine (STEM) professionals from India working abroad to facilitate closer engagement with the Indian STI ecosystem, including facilitation of R & D partnerships and collaborations, and start up ventures with Indian entities. We are building up a data base of interested STEM Indian expat professionals across the world.

We have created an online registration form available here <http://fisd.in/user-access/index.php> for this purpose. NRI/PIO STEM professionals are invited and welcome to register their details with us. We would also appreciate any suggestions on how to improve this process.
